

Videophone

By Lambert M. Surhone

Betascript Publishers Dez 2009, 2009. Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware - Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. A videophone is a telephone with a video screen, and is capable of full duplex (bi-directional) video and audio transmissions for communication between people in real-time. At the dawn of the technology, videotelephony also included image phones which would exchange still images between units every few seconds over conventional POTS-type telephone lines, essentially the same as slow scan TV systems. Currently videophones are particularly useful to the deaf and speech-impaired who can use them with sign language and with a video relay service, and also to those with mobility issues or those who are located in distant places and are in need of telemedical or tele-educational services. 104 pp. Englisch.
